

The CLI on the right is Server CLI, which shows the detail of receiving message.

Two clients on the left are requesting and receiving replies from server. This interface support navigating directories in 'Target Files' Tag, finding converted files in the 'Published Files' Tag, and then picking some of them for downloading. You can double click the name received files in 'Display Received' Tag to open them in default browser.

This is a sample product file which going through parse analysis and are added with dependencies files and buttons to show/hide class/function/ comments in src file.

小 package 组装成大 project 的 namespace pollution (open/close principle)

设计 Threadpool 要根据应用特化

并发 repo(包括很多比如 context)是全局变量，以 open close 角度，只能说是每次用的时候把 repo 锁住（未解决）

可扩展 Server

作为一个 transaction 的创建 book entity 与上传文件如何安排，在这里我分开了，其结果是如果选择不上传，应该销毁之前创建的 book entity

搞懂 epub.js 如何使用

Comment, ajax
